

OTESALY
We Show Your Beauty

Otesaly® products are manufactured by best Qualified Laboratories in this field in France with a long history of developing and manufacturing Skin rejuvenation products.

Hyaluronic acid, also known as hyaluronan, hyaluronate, HA, glycosaminoglycan, hyaluran, hyaluronate sodium, hylan, and sodium hyaluronate is touted as the "fountain of youth" by the beauty industry. Hyaluronic acid helps to retain over **1000** times its weight in water within the cell of the skin, making it an excellent moisturiser. No other biological substance can retain as much water as HA resulting in increased smoothness, softening and decreased wrinkles.

WHY OTESALY®

OTESALY⁺

Otesaly® products are a safe, effective and long-lasting alternative to other methods of correcting age-related changes, rejuvenation and appearance changes. Your transformation is quick and easy.

Products of Otesaly® are absolutely effective and are made from safe medical materials, successfully used in aesthetic medicine nowadays.

PRODUCTS

Filler Otesaly® Derm 2×1ml

Contains stabilized hyaluronic acid 25mg/ml

The particle size of the gel is 0.15-0.28mm.

Otesaly® Derm - gel based on hyaluronic acid of non-animal origin, sterile, transparent. Inserted into the middle layers of the dermis.

A pack contains: 2×1ml syringe with gel and four BD needles of 30G size.

Otesaly® Derm is designed to increase the volume of the lips, the correction of medium wrinkles and skin folds.

Approximate number of gel particles 100,000/ml.

During the 12 months, it is biodegraded and resorbed.

Filler Otesaly® Deep2×1ml

Contains stabilized hyaluronic acid 25mg/ml

The particle size of the gel is 0.28-0.5mm.

Otesaly® Deep - gel based on hyaluronic acid of non-animal origin, sterile, transparent. Inserted into the deep layers of the dermis.

A pack contains: 2×1ml syringe with gel and four BD needles of 27G size.

Otesaly® Deep is designed to increase the volume of lips, eliminate nasolabial folds, the formation of cheekbones and facial contour, filling medium and deep wrinkles.

Approximate number of gel particles 10,000/ml.

Within 12 - 18 months, it is biodegraded and resorbed.
